

JP9-2000-0106

LISTING OF THE CLAIMS:

The following is a complete listing of all the claims in the application, with an indication of the status of each:

1 1. (Currently Amended) A hosting service system of household account
2 information, comprising:
3 a user terminal connected to a network; and
4 a service provider connected to said network for providing said user
5 terminal with household account information including a plurality of items for
6 each user,
7 wherein said service provider adds additional information to
8 predetermined items in the household account information of each user and
9 provides to said user terminal, wherein the additional information is based on
10 the analysis results regarding said household account information, and
11 wherein said service provider provides household account information,
12 wherein income and expenditure items are subdivided on the basis of a
13 request from said user terminal, and sends a predetermined notice to said
14 user terminal on the basis of set notification conditions from said user
15 terminal.

2-5. (Canceled)

1 6. (Currently Amended) A household account server for providing household
2 account information to a user terminal connected to a network, comprising:
3 an account information updating feature for updating account
4 information in response to update of bank account data and reflecting in the
5 household account information;
6 an information adding feature for adding information to the household
7 account information in response to additional information about marketing;
8 ~~and~~

JP9-2000-0106

9 a notification feature for notifying the account information updated by
10 said account information updating feature and the information added by said
11 information adding feature to said user terminal; and
12 an information processing module for analyzing said household
13 account information and generating additional information about an
14 advertisement, wherein said information adding feature adds the information
15 generated by said information processing module to said household account
16 information.

7-8. (Canceled)

1 9. (Currently amended) An account information providing server for
2 providing managed household account information to a user terminal
3 connected to a network, comprising:
4 view request accepting means for accepting a view request from said
5 user terminal;
6 notification conditions accepting means for accepting the setting of
7 notification conditions from said user terminal; and
8 account information providing means for providing the household
9 account information to said user terminal on the basis of the view request
10 accepted by said notification conditions accepting means and for providing
11 the household account information to said user terminal if it matches the
12 notification conditions accepted by said notification conditions accepting
13 means; and
14 adding means for adding advertisement information to the household
15 account information as a result of an analysis of said account information,
16 wherein said account information providing means provides the household
17 account information added with said advertisement information to said user
18 terminal.

10-11. (Canceled)

JP9-2000-0106

1 12. (Currently Amended) A method for providing household account
2 information to a user terminal connected to a network using the network,
3 comprising ~~the steps of:~~
4 generating household account information on the basis of bank
5 account information of each user;
6 adding additional information to items held by said household account
7 information, wherein the additional information is based on an analysis of
8 said generated household account information; and
9 providing said household account information with the items of said
10 additional information added to said user terminal;
11 accepting notification conditions set by said user terminal; and
12 sending a notice to said user terminal if said household account
13 information matches said accepted notification conditions.

13 -16. (Canceled).

1 17. (Currently Amended) A storage medium storing a program readable by
2 input means of a computer and executed by the computer, the program
3 comprising:
4 processing for generating household account information, wherein
5 income and expenditure items are subdivided on the basis of bank account
6 information;
7 processing for adding additional information to said household account
8 information on the basis of an analysis of said generated household account
9 information; ~~and~~
10 processing for providing said household account information with said
11 additional information added to said user terminal; and
12 processing for accepting notification conditions from said user terminal;
13 and
14 processing for sending a notice to said user terminal if said household
15 account information matches said accepted notification conditions.
